### Illuminance UV Recorder WL RTR-574 is a Data Logger, with built-in wireless communication capability, designed to measure and record Illuminance, UV Intensity, Temperature and Humidity at a set interval.

Recorded data can be downloaded from an RTR-574 Data Logger (Remote Unit) via wireless communication with a Base Unit; that data can then be viewed in a graph and/or saved to PC for analysis or sharing over a network.

- As a Remote Unit, RTR-574 requires a Base Unit to carry out wireless communication. (Compatible Base Units: RTR-500. RTR-500NW. RTR-500AW. RTR-500DC, RTR-500MBS-A)
- The RTR-574 can be operated with "RTR-500 for Windows" version 1.10 or later.
- When you use "RTR-500 for Windows", please check the software version by selecting "Version Info" in the [Help] Menu. The latest version of the software can be downloaded from our T&D Web Site.
- Before using an RTR-574, it is first necessary to install the USB Device Driver from the software that comes with the Base Unit.

# Appearance Diagram and Part Names

From hereafter in this manual, Illuminance UV Recorder WL RTR-574
will be referred to as the "Unit".

Reading th	e LCD Display

1 REC Mark	The recording status is shown here. ON: Recording in progress. BLINKING: Waiting for programmed start. OFF: Recording has been stopped.
② DATA	The number of recorded readings is shown in a scale here. After every 2,000 readings the scale is marked from left to right. Storage capacity is 8,000 readings.
③ COM Mark	The communication status is shown here. ON: The Unit is connected to a PC with the USB cable. BLINKING: The Unit is in Wireless/USB/Serial communication.
Recording Mode	<ul> <li>ENDLESS: Upon reaching storage capacity of 8,000 readings, the oldest data is overwritten and recording continues. ONETIME: Upon reaching storage capacity of 8,000 readings, recording will automatically stop.</li> </ul>
(5) Battery Life Warning Mark	When it is time for the battery to be replaced, this mark will appear. Not ON: Ample battery power. ON: Time to change the battery.
6 Current Reading Messages Area	s / Normally, the current readings are shown here. Depending on the Unit's status, operational messages may also be displayed.
<ul> <li>Unit of Measurement</li> </ul>	Humidity: %, Temperature: °C / °F, Illuminance: lx, klx Cumulative Illuminance: lxh, klxh, Mlxh UV Intensity : mW/cm <sup>2</sup> , Cumulative Amount of UV Light: mW/cm <sup>2</sup> h, W/cm <sup>2</sup> h

his manual.

necessary such as in connection with medical equipment, whether directly or indirectly.

#### ty measures when using our product.

#### Cautions about using the Illuminance UV Sensors

temperature and humidity.

During use, the surface of the temperature - humidity sensor will accumulate impurities (dirt) causing a ecrease in the sensor's accuracy and sensitivity. If the sensor is being used in an environment where smoke and dust are in abundance, periodic calibration may be required.

Do not use this sensor on a human body.

If you wish to extend the length of the sensor cable, please purchase and use our optional sensor extension cable (TR-1C30 / TR-5C10). Do not cut or process the sensor cables.

Using the "Adjustment Function" in the software supplied with the Base Unit, it is possible to make desired adjustment settings to a sensor; these settings are saved directly into the sensor itself.Therefore, when a sensor is replaced, it is necessary to re-make any desired adjustment settings to be saved into the newly connected sensor

#### Wireless Regulations

#### Statement

evice complies with Part 15 of the Federal Communications Commission (FCC) rules. Operation is subject to lowing two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any ence received, including interference that may cause undesired operation.

es or modifications not expressly approved by the party responsible for compliance could void the user's y to operate the equipment.

about Antenna Usage:

vice has been designed to operate with the supplied antenna only. Use of any other antenna is strictly prohibited. tement.

vice complies with RSS-210 of the Industry Canada (IC). Operation is subject to the following two conditions: (1) vice may not cause harmful interference; and (2) This device must accept any interference received, including ence that may cause undesired operation. positif est conforme à la norme RSS 210 d'Industrie Canada.

ation de ce dispositif est autorisée seulement aux conditions suivantes : (1) il ne doit pas produire de brouillage et sateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est tible de compromettre le fonct nnement du dispositif.

products cannot be used in counters offer man where those products have been approved to use, according sountry's wireless regulations. proration shall in no manner whatsoever take responsibility for the usage of these products, nor be liable in any for legal consequences stemming from the usage of these wireless products in unapproved areas.

## Getting the RTR-574 (Remote Unit) Ready to Use

Please get the Base Unit ready first before the RTR-574 (Remote Unit).

### 1. Install the Battery.

Remove the battery cover and insert the battery, making sure that the + and - are in the correct direction Be sure to completely close the cover.

## Connect the included Sensors.

The Sensor Jacks are common for both sensors. The Temperature - Humidity Sensor and the Illuminance UV Sensor can be connected to either jack.

## 3. Turn ON the Power.

Press the POWER button until the LCD display appears

4. Register the Remote Unit by using the software supplied with the Base Unit.

When the direction appears in the software window, connect the Unit to the computer. For details about settings and functions of the software, please see the [Help] Menu in that software

If upon USB connection, the [New Hardware Detection Wizard] opens, it is necessary to follow directions to install the USB Device Driver.

- If you have not installed the Software supplied with the Base Unit, please close
- the Wizard Window and disconnect the USB cable from your PC. - For details see the Introductory Manual that came with your Base Unit.

# Battery Replacement Mark and Message

When it is time for the battery to be replaced, a battery life warning mark will appear. While this mark is on display, wireless communication may be broken or may be impossible.

If you change the battery while the mark is displayed, recording will continue uninterrupted.

If the battery is not changed, but remains in use, [SLP] will appear in the LCD display. Recording will stop in order to protect recorded data until this point.

- Recording will not be resumed even if the battery is changed at this point.

If the battery is further left unchanged, the display will automatically shut off. All of the recorded data up until that point will be erased.

- If + (plus) and - (minus) are mistaken, or if the battery terminals + and - are

shorted, the recorded data that is stored in the Unit will be lost. - If the Unit is left without a battery for some time, all data may be lost, so please work quickly when changing the battery.

# Other Messages

# FULL (Storage Capacity FULL)

When Recording Mode has been set to "ONETIME" and the Unit reaches its storage capacity of 8,000 readings, recording will automatically stop and in the LCD the current measurement and the word "FULL" will alternately appear.

# Sensor Unconnected

- This will be displayed when a sensor has not been connected or the wire has been broken.
- Measurement and recording will continue so battery power will be consumed.
- If after re-connecting the sensor and measurements can still not be displayed, it is very possible that the sensor or the Unit are defective or have been damaged.

# **Button Operation**

If no operations can be performed using buttons on the Unit, it means the buttons have been de-activated via the software supplied with the Base Unit

# POWER Button

Use this button to turn ON/OFF the Power.

## ON: Press the POWER button

- OFF: Press the POWER button until the LCD displays "OFF". - During recording, the power cannot be turned off by pressing the POWER button on the Unit. Please stop recording first and then turn off the power. - If there is ample battery power remaining in the Unit, even if the power has been
- turned off, the recorded data will be saved.

# DISPLAY Button

Use this button to change the LCD Display Pattern.

There are two LCD display patterns for readings: An Alternate Display and a Fixed Display

The factory default setting is an Alternate Display between Illuminance and UV Intensity.

With each pressing of the button the measurement items will be shown alternately in the following order for a Fixed Display:

- → Illuminance (lx, klx) → UV Intensity (mW/cm<sup>2</sup>) → Temperature (°C, °F) → Humidity (%) → Cumulative Illuminance (lxh, klxh, Mlxh) → Cumulative Amount of UV Light (mW/cm<sup>2</sup>h, W/cm<sup>2</sup>h) → Back to the Alternate Display
- When the desired measurement item for a Fixed Display appears, stop pressing the button.

### Alternate Display:

The LCD display shows all or selected multiple measurement items in turn. - Make settings for the measurement items to be displayed via the software supplied with your Base Unit.

# Fixed Display:

The LCD display shows one measurement item specified by pressing the DISPLAY button.

## Cumulative Illuminance and Cumulative Amount of UV Light

Cumulative Illuminance and Cumulative Amount of UV Light are the numerical values obtained by accumulating measurement readings from recording start until stop. The timing of accumulation will be the same as when the display is refreshed.

# INTERVAL Button

Use this button to check and change Recording Interval Setting. The factory default setting for the recording interval is 10 minutes.

#### Checking the Recording Interval:

- By holding the INTERVAL button down, the currently set recording interval will appear on the LCD display.
- If no operation is carried out after the recording interval has been displayed, the current measurement readings will return to the LCD display.

#### Changing the Recording Interval:

With each pressing of the button while the recording interval is on display, the interval time will change as follows:

1, 2, 5, 10, 15, 20 and 30 seconds / 1, 2, 5, 10, 15, 20, 30 and 60 minutes

- When the desired recording interval appears, stop pressing the button.
- Changes can only be made when recording has been stopped.

# **REC/STOP Button**

## Use this button to Start and Stop Recording.

By starting a new recording session, all data currently saved in the Unit will be erased.

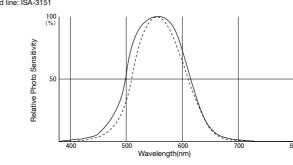

## Start Recording:

Press the REC/STOP button until the [REC] mark appears on the display.

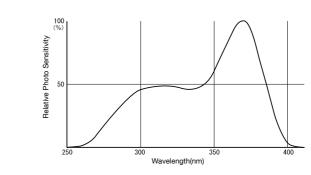

#### Stop Recording:

- Press the REC/STOP button until the [REC] mark
- disappears from the display to stop recording.
- Make settings for the recording mode (ENDLESS / ONETIME) via the software supplied with the Base Unit.
- It is possible to start recording even if the Unit is waiting for a programmed recording to start. All programming is done via the software which comes with the Base Unit

Compatible Base Units	RTR-500, RTR-5	00NW/500AW, RTR-5	00DC, RTR-500MBS-A		

1: When continually used in environments with temperatures above 60°C, accuracy of humidity measurements will decrease over time. Also, humidity cannot be measured at temperatures below -20°C. \*2: Compared to the value measured by the T&D standard sensor for calibration under our calibration light SOURCE

\*3: Only "Endless" is available when using RTR-500W for Windows or RTR-500MBS for Windows. \*4: For communication with the Data Collector RTR-500DC (Note: Optional serial communication cable TR-6C10 is required.)

5: Battery life varies depending upon multiple factors including ambient temperature, recording interval, tion, and battery performance. All estimates are based on operations car frequency of commun ied out with a new battery and are in no way a guarantee of actual battery life. The specifications listed above are subject to change without notice.
